Scan of 172.23.144.1

Scan details

Scan information	
Start time	2024-08-18T14:48:28.979182+08:00
Start url	http://172.23.144.1/dvwa/vulnerabilities
Host	172.23.144.1
Scan time	5 minutes, 28 seconds
Profile	Full Scan
Server information	nginx/1.15.11
Responsive	True
Server OS	Unknown
Application build	24.4.240514098

Threat level

Acunetix Threat Level 2

One or more medium-severity type vulnerabilities have been discovered by the scanner. You should investigate each of these vulnerabilities to ensure they will not escalate to more severe problems.

Alerts distribution

Alerts details

Insecure HTTP Usage

Severity	Medium
Reported by module	/target/http_redirections.js

Description

It was detected that your web application uses HTTP protocol, but doesn't automatically redirect users to HTTPS.

Impact

In some circumstances, it could be used for a man-in-the-middle (MitM) attack

Recommendation

It's recommended to implement best practices of HTTP Redirection into your web application. Consult web references for more information

References

HTTP Redirections (https://infosec.mozilla.org/guidelines/web_security#http-redirections)

Affected items

Web Server

Details

Request headers

GET / HTTP/1.1

Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8

Accept-Encoding: gzip, deflate, br

User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/121.0.0.0 Safari/537.36

Host: 172.23.144.1

Connection: Keep-alive

Password transmitted over HTTP

Severity	Medium
Reported by module	/Crawler/12-Crawler_User_Credentials_Plain_Text.js

Description

User credentials are transmitted over an unencrypted channel. This information should always be transferred via an encrypted channel (HTTPS) to avoid being intercepted by malicious users.

Impact

A third party may be able to read the user credentials by intercepting an unencrypted HTTP connection.

Recommendation

Because user credentials are considered sensitive information, should always be transferred to the server over an encrypted connection (HTTPS).

Affected items

Web Server

Details

Forms with credentials sent in clear text:

http://172.23.144.1/dvwa/login.php

Form name: <empty> Form action: login.php Form method: POST

Password input: password

Request headers

GET /dvwa/login.php HTTP/1.1

Referer: http://172.23.144.1/dvwa/

Cookie: security=impossible; PHPSESSID=umcqg13mq3es622i5913q7o0kv

Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8

Accept-Encoding: gzip, deflate, br

User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like

Gecko) Chrome/121.0.0.0 Safari/537.36

Host: 172.23.144.1

Connection: Keep-alive

SSL/TLS Not Implemented

Severity	Medium
Reported by module	/RPA/no_https.js

Description

This scan target was connected to over an unencrypted connection. A potential attacker can intercept and modify data sent and received from this site.

Impact

Possible information disclosure.

Recommendation

The site should send and receive data over a secure (HTTPS) connection.

Affected items

Web Server

Verified vulnerability

Details

Request headers

GET /dvwa/ HTTP/1.1

Referer: http://172.23.144.1/dvwa/

Gecko) Chrome/121.0.0.0 Safari/537.36

Host: 172.23.144.1

Connection: Keep-alive

Cookies Not Marked as HttpOnly

Severity	Low
Reported by module	/RPA/Cookie_Without_HttpOnly.js

Description

One or more cookies don't have the HttpOnly flag set. When a cookie is set with the HttpOnly flag, it instructs the browser that the cookie can only be accessed by the server and not by client-side scripts. This is an important security protection for session cookies.

Impact

Cookies can be accessed by client-side scripts.

Recommendation

If possible, you should set the HttpOnly flag for these cookies.

Affected items

Web Server

Host: 172.23.144.1

Connection: Keep-alive

∨ Cookies with missing, inconsistent or contradictory properties

Severity	Low
Reported by module	/RPA/Cookie_Validator.js

Description

At least one of the following cookies properties causes the cookie to be invalid or incompatible with either a different property of the same cookie, of with the environment the cookie is being used in. Although this is not a vulnerability in itself, it will likely lead to unexpected behavior by the application, which in turn may cause secondary security issues.

Impact

Cookies will not be stored, or submitted, by web browsers.

Recommendation

Ensure that the cookies configuration complies with the applicable standards.

Content Security Policy (CSP) Not Implemented

Severity	Informational
Reported by module	/httpdata/CSP_not_implemented.js

Description

Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks.

Content Security Policy (CSP) can be implemented by adding a **Content-Security-Policy** header. The value of this header is a string containing the policy directives describing your Content Security Policy. To implement CSP, you should define lists of allowed origins for the all of the types of resources that your site utilizes. For example, if you have a simple site that needs to load scripts, stylesheets, and images hosted locally, as well as from the jQuery library from their CDN, the CSP header could look like the following:

```
Content-Security-Policy:
default-src 'self';
script-src 'self' https://code.jquery.com;
```

It was detected that your web application doesn't implement Content Security Policy (CSP) as the CSP header is missing from the response. It's recommended to implement Content Security Policy (CSP) into your web application.

Impact

CSP can be used to prevent and/or mitigate attacks that involve content/code injection, such as cross-site scripting/XSS attacks, attacks that require embedding a malicious resource, attacks that involve malicious use of iframes, such as clickjacking attacks, and others.

Recommendation

It's recommended to implement Content Security Policy (CSP) into your web application. Configuring Content Security Policy involves adding the **Content-Security-Policy** HTTP header to a web page and giving it values to control resources the user agent is allowed to load for that page.
